

Equipment maintenance

PY SMM/vl/main/001 – Equipment Maintenance

1. Overview

- 1.1 The proper scheduled maintenance of safety equipment is fundamental to an effective (and legal) SMS
- 1.2 The maintenance requirements must be established from both the manufacturer's instructions and any Flag State requirements. Most Flag States publish Shipping Notices which contain their statutory requirements for inspection and maintenance of safety equipment.
- 1.3 Failure to comply with these Flag State requirements would be viewed as an SMS failure item and probably a deficiency sufficiently serious for the yacht to be detained.

2. Scope

- 2.1 This procedure covers the maintenance of all equipment
- 2.2 The procedure requires that a full inventory of deck, engine and safety equipment and the maintenance requirements be established. Thereafter the actual maintenance is properly undertaken, recorded and occasionally checked.
- 2.3 The procedure covers both paper based and electronic systems.
