

Departure/Noon/Arrival Reports

SMM/vl/ops/006 – Departure/Noon/Arrival Reports

1. Overview

- 1.1 The ISM Code requires the Company to respond at any time to hazards, accidents and emergency situations involving its Yachts.
- 1.2 To ensure the Company can respond efficiently to an incident, it is imperative that the Company knows the location of its Yachts geographically at all times.
- 1.3 The Company will expect to receive a report from each Yacht every time it departs a port, arrives safely at the next port and a noon position report for long sea passages (defined as a passage of 24 hours or more). If the vessel is fitted with Purplefinder or similar and the DPA has the login and passwords to obtain positional information, the reports may be waived.
- 1.4 Information regarding any change in crew or passengers must be relayed to the company immediately.

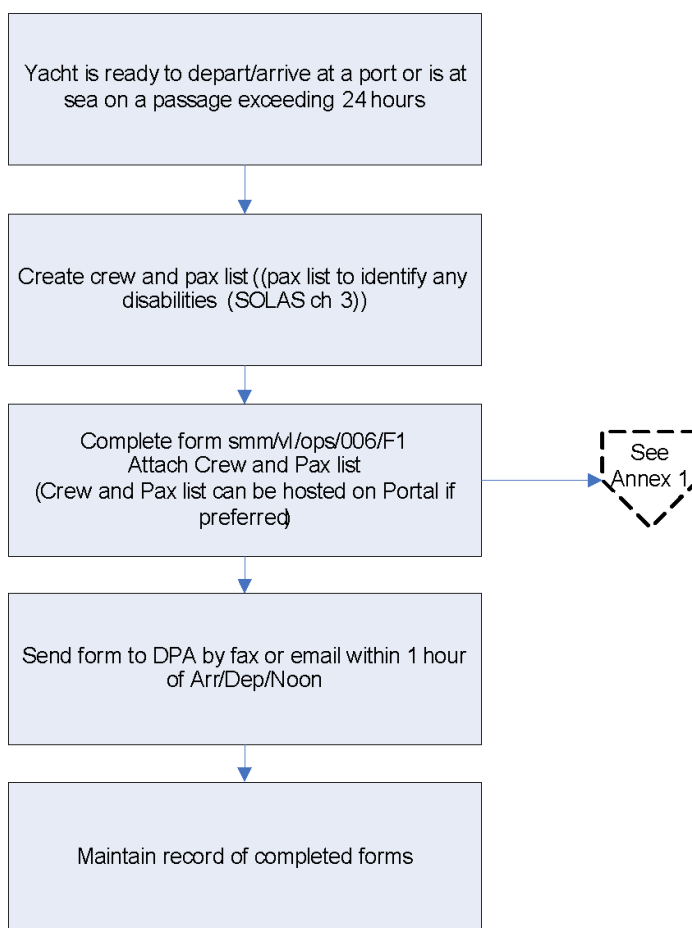

2. Scope

- 2.1 This procedure applies to the Yacht at sea or in port. The requirement to send position reports does not apply when the Yacht is in dry-dock or laid up for long periods alongside a berth.
