

Company Cyber Security Policy

PY SMM/vl/safety/016 – Company Cyber Security Policy

1. Overview

- 1.1 The digitisation of maritime operations, the reliance on technology, network connectivity for daily onboard and on shore operations means that shipping is vulnerable to the threat of cyber incidents.
- 1.2 The IMO identifies the threat of a cyber incident as a specific threat that the company is, “required to take into account cyber risk management in accordance with the objectives and functional requirements of the ISM Code”. Therefore, cyber risk management is an inherent part of the company’s safety culture and is to be considered at all levels including senior management ashore and onboard personnel.
- 1.3 A cyber incident is an occurrence that, actually or potentially has adverse consequences to an onboard system, network, computer or to the information that they process, store or transmit and which may, require a response action to mitigate the consequences. Cyber incidents may not be malicious in origin (i.e. not a targeted attack on the ship/company) but, instead may be a result of poor cyber security practice.
- 1.4 The methods and motivations behind a cyber incident vary. Historically, attackers were often simple opportunists, exploring the internet to see what systems they could manipulate. they had little awareness of the illegality or significance of their actions. In recent years, this activity has largely been replaced by cyber-incidents for financial gain
- 1.5 It is impossible to be completely cyber secure, although effective cyber security management can significantly, lessen the likelihood and severity of an incident. Creating a culture of cyber awareness centered around protective, preventive measures and training is crucial. Cyber attackers may exploit password weakness, poor crew cyber security practices or outdated software and systems. “if it isn’t broken, don’t fix it” is a mentality that is NOT compatible with effective cyber security practices.

2. Scope

- 2.1 The Security Policy is a clear and concise statement. It describes the aims of the Company and outlines a strategy and plan of action to achieve and maintain that aim.
- 2.2 This Policy will be reviewed at regular intervals to ensure that it remains relevant and effective.

PY SMM/vl/safety/009 - Safety Policy

PY SMM/vl/safety/010 - Environmental Policy

PY SMM/vl/safety/011 - Fatigue and Drugs Policy

PY SMM/vl/safety/012 - Discipline Policy and Code of Conduct

3. Policy

COMPANY CYBER SECURITY POLICY

The Company is committed to managing yachts to the highest cyber security standards. It will strive to meet all of the duties and obligations imposed on shore management and its yachts by international and respective flag state legislation.

The Company will comply with the International Safety Management (ISM) Code, and the International Ship and Port Facility Security Code (ISPS) and will, where appropriate implement these Codes on all yachts, providing the necessary support to assist the Company Security Officer (CSO), Master and the Ship Security Officer (SSO) with their responsibilities.

The Company recognises the ultimate authority and responsibility of the Master and will provide shore-based support to assist him in the discharge of his duties.

The secure and safe operation of yachts and the security and safety of those who sail on them is paramount to the Company.

Signed on behalf of Company:
